

40m Horizontal Loop Antenna (CHA SKYLOOP 40)

40 and 20 meters with No Tuner!

The CHA SKYLOOP 40 is an extreme performance horizontal full-wave loop antenna. The main advantages of a horizontal loop antenna are reduced background noise and a better gain over a dipole—which means signals will be stronger. In fact, most operators can't believe the increase in performance over their old dipole antenna. The horizontal loop antenna also has strong Near-Vertical Incidence Skywave (NVIS) propagation characteristics.

This antenna will operate on the 40 and 20 meter ham bands without a tuner. It also covers 17, 15, 12, and 10 meters with an antenna tuner. Its' low observable characteristics and short legs make it a good choice for hams living in HOAs or on small lots. It is also an outstanding shortwave listening (SWL) antenna.

Notional SKYLOOP 40 Installation

Specifications

- Frequency: 7.0 - 7.3 MHz (40m) and 14.0 - 14.35 MHz (20m) without a tuner
- Power: 500W SSB, 250W CW, 100W Digital Modes
- Length: 141 ft. Total Loop Length
